## SHOWER ENCLOSURES

### *Glass Cleaning and Maintenance Instructions*

#### **CLEANING:**

Keeping your shower enclosure clean is an important part of the long-term health and performance of your glass and hardware. The main key with this process is deterring the accumulation of water spotting and mineral deposits on the glass. A consistent use of a rubber shower squeegee is recommended immediately after shower use.

Uniformly apply a mild solution of soap and water or a non-abrasive commercial window washing solution to the surface using applicator methods. Remove all liquid from the surface with a soft flannel or cotton cloth immediately following the application of the cleaning solutions.

Care should be taken to ensure that no foreign particles become trapped between the cloth and the glass. These particles, if allowed to contact the glass or surface, will mar and damage the glazing.

Do not use razor blades or harsh substances. As noted above, a consistent use of a rubber shower squeegee is recommended immediately after shower use.

Do not use abrasive or highly alkaline cleaners. Benzene, gasoline, acetone, MEK, and carbon tetrachloride should never be used on glass surfaces.

Cleaning agents found to be compatible with glass and polycarbonates are as follows:

Formula 409

Joy

Windex with Ammonia D

Palmolive

Ivory

Isopropyl Alcohol
