## SHOWER DOOR HARDWARE

### *Shower Door Hardware Cleaning and Maintenance Instructions*

#### **CLEANING:**

Cleaning and maintenance of your INVISIWALL® Shower Door Hardware product is the key to a long and efficient performance life. The basic approach is not laborious at all and should only be done during routine cleanings of the bath enclosure space.

Using warm water mixed with a mild soap (non-perfume) applied with a soft cloth (non-abrasive), wipe the INVISIWALL® Shower Door Hardware methodically. After cleaning, dry all of the hinges with a clean dry towel. This effort keeps the hardware free of deposits accumulated from daily use and working to its fullest performance. As noted below, please do not use abrasive cleaners on the INVISIWALL® Shower Door Hardware as it can damage the device beyond repair and use.

#### **MAINTENANCE:**

Our hinges are greased at the factory for quiet operation. After installation, if there is squeaking that occurs, put a drop of house oil on the white nylon washer that the hinge body pivots on. This washer acts as a buffer, so the body of the hinge does not pivot directly on the brass center block. This solution doesn't require the disassembly of the hinge. **Note: Do not use spray lubricant on hinges.** If the hinge disassembles upon re-assembly, use white lithium grease to lubricate the interior mechanism.

Many components are coated with a clear lacquer that will be damaged if subjected to harsh, abrasive chemicals. Never use an abrasive cleaner on the hardware. We recommend that drying the hinge with a clean, soft towel on a daily basis is the best way maintain a fine finish. If you have mineral deposit build-up, mix a couple of drops of a mild liquid soap into a cup of warm water. Clean the hardware using a soft cloth and rinse thoroughly with clean, warm water and dry.
